

## Juvéderm®

Juvéderm® is the only HA filler with FDA approval to last up to one year.\* Ask your physician how you can get long-lasting results with Juvéderm®. Juvéderm® injectable gel is a “next-generation” smooth consistency gel dermal filler that helps to instantly restore your skin’s volume and smooth away facial wrinkles and folds, like your “smile lines” or “parentheses” (nasolabial folds—the creases that run from the bottom of your nose to the corners of your mouth). Juvéderm® comes in two formulations—Juvéderm® Ultra and Juvéderm® Ultra Plus.

Juvéderm® is indicated for injection into the mid to deep dermis for correction of moderate to severe facial wrinkles and folds (such as the nasolabial folds).

Use our Treatment Visualizer to see how Juvéderm can help smooth those wrinkles on the side of your nose and mouth.

### What does JUVÉDERM® do?

Juvéderm® injectable gel temporarily adds volume to facial tissue and restores a smoother appearance to the face.

### What makes JUVÉDERM® different from other dermal fillers?

JUVÉDERM® is the ONLY hyaluronic acid (HA) filler FDA approved to last up to 1 year.\* Our unique manufacturing process provides a high concentration of cross-linked hyaluronic acid for long-lasting results. It also works to create a smooth consistency gel that flows easily into the skin and provides a smooth, natural look and feel. All other hyaluronic acid dermal fillers currently on the market are made of granular consistency gels. Also, Juvéderm® is the first hyaluronic acid dermal filler that has demonstrated its safety and effectiveness in persons of color.

\*Juvéderm® is indicated for injection into the mid to deep dermis for correction of moderate to severe facial wrinkles and folds (such as the nasolabial folds).

### How is JUVÉDERM® injectable gel used in treatment?

Your healthcare provider eases Juvéderm® injectable gel into the skin using a fine needle to temporarily fill in and augment the treatment area and smooth moderate to severe facial wrinkles and folds, such as “smile lines” or “parentheses” (nasolabial folds) and “marionette lines” (oral commissures). Juvéderm® temporarily adds volume to the skin and may give the appearance of a smoother surface.

## **Is treatment with JUVÉDERM® injectable gel painful?**

Injections may cause some discomfort during and after the injection. The smooth consistency gel of Juvéderm® allows your doctor to administer it easily and smoothly. Also, Juvéderm® is injected directly into the skin using a fine needle to reduce injection discomfort. Your doctor may choose to numb (anesthetize) the treatment area to further minimize discomfort.

## **How long does treatment usually take?**

The injection process takes only about 15 minutes. You'll also need to allow time to consult with your doctor prior to treatment.

How long do results last?

JUVÉDERM® is the ONLY hyaluronic acid (HA) filler FDA approved to last up to 1 year.\* Talk to your healthcare professional about Juvéderm® today—so you can start seeing results!
