

Red Spots & Vein Removal

Common Red Spots Treated with Lasers

- Telangiectasias – commonly known as facial spider veins or broken blood vessels.
- Rosacea (red face) – affects the skin of the face around the nose, chin, and cheeks causing a blush or sunburned look.
- Angiomas – small red spots which may be slightly raised or just beneath the surface of the skin.
- Port Wine Stain Birthmarks – vascular lesions that grow rapidly after birth and may impair the function of another organ.
- Warts – small benign growths in the skin that usually appear on the hands or feet.
- Scars – red raised scars that are often caused by surgery, trauma, or burns.
- Stretch Marks – frequently appear after pregnancy over the stomach, thighs, buttocks, and lower back.

Candela VBeam Pulsed Dye Laser

Pulsed Dye Lasers deliver an intense but gentle burst of light into selectively targeted areas of the skin. The light is absorbed by specific blood vessels or melanin-pigmented areas in the dermis depending on the condition being treated. Factors such as the age, color and type of lesions, as well as the location on the body, all determine whether lesions can be removed.

What is the procedure for being treated with a Pulsed Dye Laser?

Your practitioner will ensure you are as comfortable as possible; most patients are reclined or lying down depending on the area being treated. Both the patients and the practitioner will wear protective eyewear. When treatment begins, the laser will be calibrated and parameters will be set based on the specific condition being treated, each condition and each individual is unique and these settings maximize the results you will see following treatment.

Are there any requirements for treatment – how do I know if I qualify for treatment?

The only requirement is that you have a desire to improve the condition of your skin. Most patients who receive cosmetic laser treatment opt for procedures to correct skin conditions not out of medical necessity, but because they are interested in improving the appearance of their skin without invasive surgery that would cause downtime away from daily activities. From total facial rejuvenation, which involves the reduction and removal of red and brown pigmented lesions with a general firming of the skin, to the removal of sun-spot damage, patients should discuss with their practitioner which treatments are right for them.

Does it hurt?

No anesthetics are required, but they may be used. The feeling most patients report is a warming or tingling sensation during treatment. The skin being treated is additionally protected by Candela's dynamic cooling method, DCD, which delivers a cooling mist on to the skin before the laser pulse is emitted. This cooling mist increases comfort during treatment, as well as protects the skin to minimize side effects like redness.

Is PDL Treatment safe?

Yes, in fact, the treatment is so safe that it has been successfully used since the 1980's for the treatment of port-wine stain birthmarks in infants and young children. During treatment, the epidermis is protected by Candela's exclusive dynamic cooling method, DCD, which sprays a cooling mist onto the targeted area of skin before each laser pulse, maximizing comfort and protecting the skin during treatment.

Are the results of Pulsed Dye Laser treatment permanent?

Permanency of results depends on many factors, like the condition being treated, or lifestyle of the patient. For example, if a patient has sun spots removed and continues to spend time in the sun without adequate skin protection, it is likely that the sun spots will return. Talk with your practitioner about your goals and expectations for treatment.

How soon will I see results of my treatment?

Most patients notice beneficial results right away and often times feel a firming or tightening of the treated area. The results of laser therapy vary depending on the condition that is being treated and the number of treatments required for clearance.

What are the side effects of treatment?

Some patients experience redness or mild swelling in the treated area immediately following treatment; this usually goes away in a few hours. Occasionally purpura, a laser bruise, may occur. Purpura is transient and usually disappears in three to five days.

Are there any special precautions I need to take before or after treatment?

It is recommended to avoid sun exposure before and throughout treatment to maximize results. A sunblock of SPF 30 or higher should be worn daily during this time. Post treatment care guidelines depend on the condition treated and should be discussed with your practitioner.

Is Pulsed Dye Laser treatment covered by insurance?

Most insurance companies do not offer reimbursement for cosmetic and aesthetic procedures. Some carriers will, however, cover the treatment of disfiguring birthmarks such as hemangiomas or port-wine stains. In addition, the treatment of psoriasis and rosacea may be covered by some insurance companies. Please consult your insurance carrier for more details.

How much does Pulsed Dye Laser treatment cost?

Cost depends on the size of the area being treated as well as the condition being treated. Talk with your practitioner to learn more about treatment fees.

About Skin & Laser Surgery Center

Under the direction of Dr. Amir A. Bajoghli, Skin & Laser Surgery Center PC specializes in Laser & Dermatologic Surgery as well as Mohs Micrographic Surgery. Skin & Laser Surgery Center treats patients for all skin care concerns, including skin cancer surgery, cosmetic dermatology, sclerotherapy, laser peels, laser hair removal, hyperhidrosis, rosacea, and acne treatments.

Our Office Locations

Skin & Laser Surgery Center provides a full range of services at our four facilities located throughout the Greater Washington area.

Tysons Corner, VA

8130 Boone Blvd.
Suite 340
Vienna, VA 22182
(703) 893-1114

Stafford, VA

(800) 264-2653
125 Hospital Center Blvd.
Suite 105
Stafford, VA 22554

Woodbridge, VA

2200 Opitz Blvd.
Suite 245
Woodbridge, VA 22191
(703) 492-4140

Washington, DC

1120 19th N.W.
Suite 250
Washington, DC 20036
